

## Program List

The main folder contains a folder “src” and other report files:

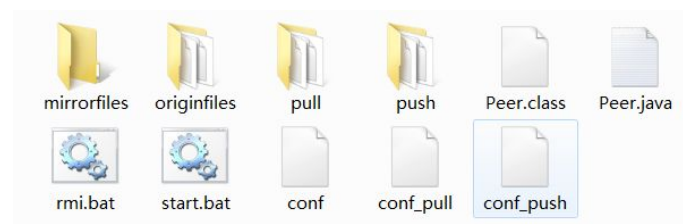

In the src:

*filepool* -- contains 120 files for each peer.  
*p1 - p12* -- are peer codes.  
*conf\_btree.bat, conf\_mesh.bat, conf\_ring.bat, conf\_star.bat* -- script to configure topology.  
*getcode.bat* -- copies \*.java in p1 to other peers, just for debugging.  
*prepfiles.bat* -- copy certain files into each peer's originfiles folder.  
*preprmi.bat* -- start the RMI service.  
*setpull.bat* and *setpush.bat* -- set set a root conf file to assign running mode.  
*start.bat* --start compiling and then run 12 peers

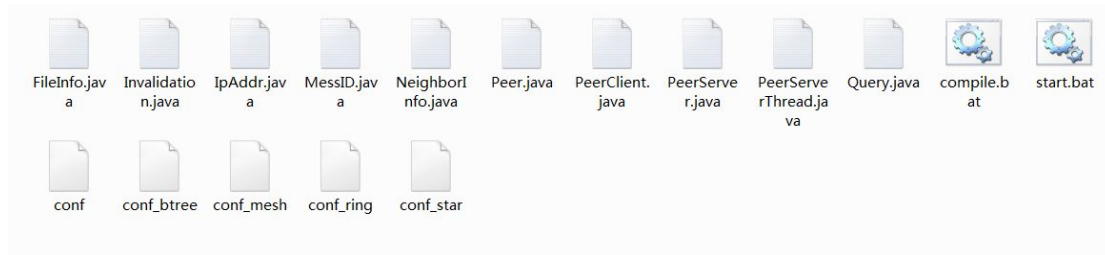

In folder p1 for example :

*mirrorfiles* -- storing download files  
*originfiles* -- storing own files  
*pull* -- pull mode code

*push*                   -- push mode code  
*Peer.java*             -- program entrance  
*rmi.bat*                -- real RMI startup  
*start.bat*             -- run java program  
*conf*                   -- configure for pull or push  
*conf\_push*            -- configure to push  
*conf\_pull*             -- configure to pull

In p1/push for example:

*\*.java*                -- source code  
*compile.bat*          -- run javac \*.java  
*start.bat*            -- run this peer, debug only  
*conf*                  -- configure file to be loaded  
*conf\_xx*              -- configure to xx topology
